Study on water and salt balance of plateau salt marsh wetland based on time

Moreover, the randomness in the temporal dynamics of run-off processes requires the development of new high-flow statistics for better describing the evolution of landscapes like river floodplains, which are more impacted by extreme flows. Ecosystems 2001; 4 5 :461-478.

Breeding system, colony structure, and genetic differentiation in the Camponotus festinatus species complex of carpenter ants. Journal of Geophysical Research-Atmospheres 2006; 111 D6 :Art.

The vegetation, climate, and fire history of a mountain steppe: A Holocene reconstruction from the South Caucasus, Shenkani, Armenia

Second, monitoring and research on each completed module will improve the next. The birds reestablished on their own, but it is not clear where they came from.

How Plants Influence Resilience of Salt Marsh and Mangrove Wetlands to Sea

Plant recolonization was governed by optimal inundation, high organic matter content at high elevation, and rhizome survivability following sediment burial.

How Plants Influence Resilience of Salt Marsh and Mangrove Wetlands to Sea

The effect of standing biomass on flow velocity and turbulence in Spartina alterniflora canopies.

On the main components of landscape evolution modelling of river systems

Stable carbon isotopes δ13C in coral skeletons.
