Environmental > Ecosystem  
Restoration > RECOVER**

The bay has enormous value, without the bay there is no local economy. The Park Service would love to have more water of better quality delivered to the park, and would also like to see the park buffered against the harmful spread of agricultural and urban-industrial land use. Yet even with climate change and sea-level rise adding to the search for long-term solutions, nothing truly transformative has happened.

### Miami Beach Sued Over Biscayne Bay Sewage Leaks

In 2006 the NPCA reported that at least 27 of 35 fish species studied in the park were over-fished, largely because many species could be legally harvested before they reached the size of sexual maturity. There was no evidence of improved commercial and sports fishing.

### Biscayne Bay Southeastern Everglades Ecosystem

The sewage almost always end up in Biscayne Bay.

### Water Quality

The Biscayne Bay Southeastern Everglades Restoration BBSEER Project, a part of the Comprehensive Everglades Restoration Plan CERP, that seeks to protect and restore the remaining Everglades ecosystem while providing for other water-related needs in the region, is being undertaken in partnership with the South Florida Water Management District.

### Environmental Monitoring

The dredge spoil was used to create Dodge Island, Lummus Island, as well as Fisher Island. Email: Ligia Collado-Vides Senior Lecturer and Associate Chair, Department of Biological Studies Ligia Collado-Vides is a marine botanist with a research emphasis in ecology of tropical marine macroalgae, or seaweeds and sargassum. It is a shallow inlet of the Atlantic Ocean along southeastern Florida that provides a home for all kinds of sea life such as: pink shrimp, stone crabs, seagrasses, manatees, dolphins and an amazing variety of wading birds.

## **\$20 Million Restoration Plan For Biscayne Bay A Promising ‘First Step’ Says Miami Waterkeeper**

Monroe County is adjacent to Card Sound and Southern Biscayne Bay, and is home to an estimated 76,047 residents in 2016. The data reveals trends, seasonal highs and lows, weather patterns, temperature fluctuations, overland flow rates and surface runoff from the land and drainage canals. In 1992 Hurricane Andrew ravaged Miami, wrecked nearby Homestead Air Base beyond repair, and damaged Biscayne National Park so badly it was closed for four months.
