In , an n -ary relation on n sets, is any subset of Cartesian product of the n sets i .

Relation (mathematics)

So you'd have 2, negative 3 over there. The graph of a function f is a drawing that represents all the input-output pairs, $x, f(x)$.

Hilton

X cannot be 12 or 33. So you don't have a clear association. So this is a function; it's just an extremely boring function! Negative 2 is already mapped to something.

U.S. Relations With Pakistan

In this problem, x could be -11. Civilian Assistance to Pakistan The primary focus of the U.

U.S. Relations With Pakistan

Sets of ordered-pair numbers can represent relations or functions.

Relation (mathematics)

It should just be this ordered pair right over here.
