### [Organizing and managing tropical disease control program

. We approximated the predictive distribution for all provinces using sequential stochastic simulations of the joint distribution of the case counts for each province. First Experience of Concomitant Vaccination Against Dengue and MMR in Toddlers.

### Case Studies in Public Health

Historical data is also needed to allow for training of the prediction model s. This suggests that inaccuracies in the real-time predictions once those recent 3 months are discarded are driven less by the reporting delays than they are by model misspecification and other background noise in the data.

### Case

This is an open access article distributed under the terms of the , which permits unrestricted use, distribution, and reproduction in any medium, provided the original author and source are credited. Region-wide synchrony and traveling waves of dengue across eight countries in Southeast Asia. Provinces are ordered by by population larger populations on the top.

### 2017 Monthly Case Studies

Elevated levels of full-length and thrombin-cleaved osteopontin during acute dengue virus infection are associated with coagulation abnormalities. Competing interests All financial and non-financial competing interests must be declared in this section. In comparison with the national data described above, these incidence data provide a more accurate estimate of the burden of dengue because of the active surveillance in a defined cohort and the laboratory-confirmation of cases.
