Treatment Guidelines and Resources

The reader should not disregard medical advice or delay seeking it because of something found on this site. The GAD-7 and the Severity Measure for Panic Disorder are free diagnostic tools. The most common sign of bubonic plague is the rapid development of a swollen and painful lymph gland called a bubo.

Merck Manuals Professional Edition

Download full Detoxification Treatment Manual Books now! Greater GAD-7 scores correlate with more functional impairment. Restlessness or feeling keyed up or on edge. Download full Occupational Therapy Manual Books now! B , , To avoid relapse, medication should be continued for 12 months after symptoms improve before tapering.

Diagnosis and Treatment

As hypovolaemia develops, the pulse rate increases and the pulse becomes weaker.

Merck Manuals Professional Edition

Available in PDF, ePub and Kindle.

Merck Manuals Professional Edition

There is insufficient evidence to support a concise recommendation on the prevention of PD and GAD in adults. The disturbance is not better explained by another mental disorder e.

Diagnosis and Treatment

. Those with PD may be more sensitive to caffeine than the general population because of genetic polymorphisms in adenosine receptors. Hypoglycaemia, hypothermia and septic shock also cause reduced consciousness.

Diagnosis and Treatment

Some factors associated with GAD include female sex, unmarried status, lower education level, poor health, and presence of life stressors. B, Selective serotonin reuptake inhibitors are considered first-line therapy for GAD and PD. Depping AM, Komossa K, Kissling W, Leucht S.

Merck Manuals Professional Edition

Adding psychotherapy to antidepressant medication in depression and anxiety disorders: a meta-analysis. Because benzodiazepines are associated with tolerance, they should be used only short term during crises. Emerging evidence suggests that patients with GAD may experience persistent activation of areas of the brain associated with mental activity and introspective thinking following worry-inducing stimuli.
