Thus, the system has access to measurements from the data collector, maintenance histories from the database, and symptoms observed by the user. It results in higher levels of vibration, which then potentially leads to the bearing failure, or the product quality problem, or the failure of a weld or fastener, or the mistaken belief that a rotor is seriously out of balance. Dark or unmonitored corners and overflowing or disorganized merchandise make it easy for shoplifting to go undetected.

RESONANCE The Silent Killer of Rotating Machinery

Carry out some random checks of financial records and supply inventory at different times of day on different days of the week. In the 16th century in German mines, Agricola used suction pumps and force pumps with a crank-connecting rod system and wheels with pots, carried by men similar to squirrels in a cage. This classification made it possible to determine machine performance away from the testing area.
