Temporary arterial shunt in the severely injured limb

J Bone Joint Surg Am.

The decision to salvage or amputate a severely injured limb

General principles of orthopedic injuries.

The utility of scores in the decision to salvage or amputation in severely injured limbs

Secure the bandage with adhesive tape or continue to maintain pressure with your hands. A buckling knee could signal an ACL tear or a cruciate ligament injury. Place a sterile bandage or clean cloth on the wound.

Severe bleeding: First aid

This process results in swelling as fluid rushes into the holes in the tissue left by the macrophages, and this is key to muscle regeneration.

Temporary arterial shunt in the severely injured limb

Department of Veterans Affairs collaboration. You may experience agony for a moment, but pay attention to how long it takes to go away.

Temporary arterial shunt in the severely injured limb

This report is part of the RAND Corporation Research report series. Email Sign Up Engel, Charles C. Don't put direct pressure on an eye injury or embedded object.
