The Flame by Gabriele D'Annunzio

The diatoms are tiny geometrical forms, composed of a tiny shell of siliceous material enclosing a minute drop of plasm, resembling glue. All life on our planet is, so to speak, just on the outer fringe of this infinite ocean of force. That fire was very well known to the ancients to be representative of the Divine love, is very evident from the fact that this representative spread from the Ancient Church even to remote nations which were in idolatrous worship, and who are known to have instituted a sacred perpetual fire, and to have appointed to it virgins, called the Vestals.
