The Migration of Shorebirds

For example, we observed seasonal differences in the highest counts of White-rumped Sandpiper *Calidris fuscicollis* vs Pectoral Sandpiper *C. Our* goal is to identify new priority areas for shorebird conservation in the Caribbean, and to better understand the status, abundance, and distribution of shorebirds in the region. Only the highest count for each site per season per year is included.

North American Bird Migration at me.stfw.info.cdn.cloudflare.net!

North America has the greatest diversity of shorebird species and largest numbers of shorebirds in the world. We defined seasons as Fall August-November, Winter December-February, and Spring March-May, to coincide with primarily migratory and non-migratory time periods. Red Phalarope or southern South America e.

The third part, Methodology, includes five chapters that cover topics not discussed in Bart et al. The concentrating effect of urban lights leads some of these birds to stop in city parks. We did not include Snowy Plover in as its taxonomy is debated so it required a more nuanced treatment see Discussion; but there are sites in the Caribbean that appear to be important for this species.

Dendroica: Review: Shorebirds of North America, Europe, and Asia

Data were collected at 792 points on 52 5-km x 5-km plots.

Identification of priority shorebird conservation areas in the Caribbean [PeerJ]

PeerJ 8: e9831 Despite being geographically central to the Atlantic Americas Flyway for migratory birds, the Caribbean is often overlooked or underappreciated when addressing the conservation of North American shorebirds. The sites important to shorebirds identified by BirdLife are a unique collection as much of the data are gathered by communicating with local experts. Just one checklist in January 2014 reported 17,630

individuals.

Distribution and migration of North American shorebirds (eBook, 1910) [mc.stfw.info.cdn.cloudflare.net]

Bart et al, this volume, chapter 15 discusses priorities for the future including both methodology and regions to survey.

Shorebird Migration

The tanagers will need these fresh feathers for the next leg of their migration.

The Migration of Shorebirds

Observations that surpass geographic population thresholds. It seems unlikely that fixed heading orientation would be sufficient to successfully guide a flight to such a small goal area, and it does not seem likely that the birds could search extensively without feeding after a 7000 km flight.
