Convergence analysis of a nonlinear Lagrangian method for nonconvex semidefinite programming with subproblem inexactly solved

This class includes many classical algorithms, such as steepest descent and Newton's algorithm in unconstrained optimization, the Frank-Wolfe and gradient projection algorithms in differentiable, constrained optimization, and regularization algorithms such as the proximal point algorithm for general nondifferentiable optimization. Programming Series B, 104 2005 , 701.

CiteSeerX — Cost approximation: A unified framework of descent algorithms for nonlinear programs

Convergence analysis of a nonlinear Lagrangian method for nonconvex semidefinite programming with subproblem inexactly solved

MSc in Business Mathematics at the Martin-Luther-University Halle-Wittenberg, Germany 2011. Boyd, Semidefinite programming,, SIAM Rev.

Existence and approximation of solutions for generalized extended nonlinear variational inequalities

There is another setting arising from perturbation theory. In this paper, we consider a new class of generalized extended nonlinear quasi-variational inequality problems involving set-valued relaxed monotone operators and establish its equivalence with the fixed point problem.
