## Autoregressive modeling of transfer functions in frequency domain to determine complex travel times

However, rhyodacitic magma was erupted at Grouse Hill, Steel Bay, and Redcloud Cliff in the form of pumice and lava flows made of hornblende-phyric, or chemically evolved, rhyodacite. A rapid influx of sediment was deposited shortly after the end of the Tioga glaciation somewhere between 12.

## Seismic tomography and modeling of complex geological structures

The exact cause is not well understood; it may have been the result of the enormous weight of the tephra or the expansion of the eruptive vent. Climate change threatens the American pika populations in the Crater Lake area, as they cannot tolerate warm weather because their fur does not release heat efficiently. ## Volcanoes of Shasta County, California

The stable isotope data for the Fall River Springs are consistent with groundwater recharge on the Medicine Lake Volcano and adjacent lava field.

Many that were glaciated have since been covered by more recent lava flows.
