### Review, Oceania

Quantitative Field studies can be descriptive, which means they are

qualitative, focusing on the significance of observations made rather than numerical data. Research has shown that the concepts of a secure base and internal working models exist and play an important role in the development of relationships in infancy, childhood, and adulthood.

### LE pistémologie historique de Gaston Bachelard. (1969 edition)

The third group was labeled ambivalent or anxiously attached, and tended to be clingy from the beginning and afraid to explore the room. The first question is, Can attachment theory be supported by empirical evidence? Attachment Q-sort correlates of the adult attachment interview. The origins of ethology can be traced to the work of Darwin.

### Browse subject: Child psychology

The most important question one should ask is if this study provides enough findings to base a theory on it.

### Browse subject: Child psychology

American Catholic Sociological Review October 1949. Temperament Heredity seems to have the strongest influence on physiological functions such as sleep and feeding patterns and the infant's level of excitability. Watching the behaviors of animal species in their natural habitats, Lorenz and Tinbergen observed behavioral patterns that promote survival.
