It disappeared from history after that. By means of the all-series product utility module system, it can reduce the module development cost of new product at the same time of offering fast customization to customer, and ensure economy while realizing customization. This will ensure that the flow and pressure expected from your fan will be similar to your impeller.

The following image shows the meridional view of the centrifugal fan split into three components: Each component consists of individual STL files. The laboratory helps ensure precise tests for reliable product quality and accurate technical data. However, the results are sufficient to validate Charles Innes' theory, on which Fans is based.
