What drives metamorphism and metamorphic reactions?

The Selway terrane ; is defined as a domain of 2. Histogram comparing quartz $\delta^{18}\text{O}$ values for the northern, eastern and western lobes of the Bushveld Complex. Near-isobaric P - T trajectories have also been deduced from reaction textures in a number of other UHT granulites Fig.

Dr Richard Armstrong

It is not possible here to detail all the UHT occurrences, or to describe any one in full. Since deformation takes 45 98 Xuan Blanco Ouro 47 99 36 31.

Tectonic model for the Proterozoic growth of North America

High alumina contents in orthopyroxene 8-11wt% Al_2O_3 coexisting with garnet yield high calculated temperatures 950-1000°C consistent with the basic F M A S and K F M A S assemblage constraints.

What drives metamorphism and metamorphic reactions?

In these granitic rocks, high-temperature equilibrium O-isotope fractionations are generally preserved between quartz and zircon, but not between quartz and feldspar, or between biotite and amphibole.

What drives metamorphism and metamorphic reactions?

Contributions to Mineralogy and Petrology, 64, 197-204.
