I couldn't recommend it any higher. The majority of pages are undamaged with minimal creasing or tearing, minimal pencil underlining of text, no highlighting of text, no writing in margins.

**Handbook of gem identification (1975 edition)**

Description: Santa Monica CA: Gemological Institute of America, 1977. Dust jacket has some general scuffing and corners lightly chipped. I have a small reference library on Gemstone Identity and this is ranked second in my library.
