Topology estimation of a digital subscriber line

In general, most DSL connections offer download speeds between 5 to 35Mbps and upload speeds between 1 to 10Mbps.

The 1980s saw the development of techniques for communications that allowed the limit to be greatly extended. It is observed that the signal amplitude is low in the order of $1e-3$ and the rate of decay is steep. The user can change the bit allocation table to achieve higher or lower data rates see next bullet.
