Stinking Smut/ Common Bunt/ Hill Bunt of wheat

Cool temperatures 41-59°F favor the germination of the teliospores. These fungi survive on the surface of the seed and in soil. One of the main differences between the two is in the external morphology of their episore.

Stinking smut of wheat

Reference to commercial products or trade names does not imply endorsement by MSU Extension or bias against those not mentioned. Sometimes the bunt balls are not broken during threshing, as they are protected by a tough outer layer.

Wheat Disease Alert

Finally, most of the mycelial cells produce teleutospores.

Stinking smut of wheat

It is safer to avoid feeding it to breeding stock, young animals, and lactating or gestating animals. Note: Crops that emerge slowly are at elevated risk. After compatible sporidia anastomose fuse to form the H-shaped structure, the resulting dikaryotic, infectious hypha penetrates a seedling.
