Using any manipulative, fingers, blocks, or an abacus, is still using visual manipulatives.

**Mathematics of choice; or, How to count without counting : Niven, Ivan Morton, 1915**

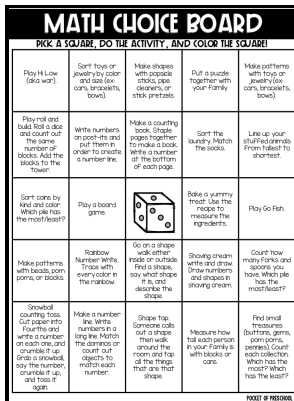

It is the idea that if we have a ways of doing something and b ways of doing another thing and we cannot do both at the same time, then there are a + b ways to choose one of the actions. One is known as the Sum Rule or Disjunctive Rule , the other is called Product Rule or Sequential Rule. Previously, the monarch was not known by numeral but by an epithet such as Edward the Confessor.

**Early Counting Systems**

These cords and knots are carefully arranged so that the position and type of cord or knot gives specific information on how to decipher the cord. If the numbers are the numbers of possibilities at n stages of events, the number of different overall sequences of events that can occur is the product of those numbers:.
