investigations.

Carpenter ant

They use biochemical to mark the shortest path that can be taken from the nest to the source.

Geographic distribution of the anti

According to this estimate, the total of all the ants in the world is approximately equal to the total biomass of the entire race. By the and , ants had come to represent 20—40% of all insects found in major fossil deposits.

Camponotus modoc

Formica neorufibarbis

Utah State University Extension and Colorado State University Extension. The role of workers may change with their age and in some species, such as , young workers are fed until their gasters are distended, and act as living food storage vessels. The importance of the different bacteria genera and their roles in digestion and nutrient processing, nitrogen fixation, larval nutrition and disease defense remains unknown, and gives opportunity to further

Other *Formica* and *Polyergus* species exploit *fusca* group species by enslaving their workers or through new queens parasitizing existing colonies to start their new colonies.
