## Physiology

Therefore, Metchnikoff concluded that the ability of cells to engulf foreign microorganisms acts as an active defense mechanism, giving rise to the concept of cellular innate immunity. Studies on these cells resulted in a substantial literature spanning immunology, hematology, biochemistry, and pathology.

### **'Ontogeny recapitulates phylogeny'**

Phylogenetic trees are constructed considering the evolutionary history and relationships. While the goal of phylogeny is to reconstruct the evolutionary tree of life, taxonomy uses a hierarchical format to classify, name, and identify organisms.

### **Pharmacology**

How do you know what it all means? It may now be more fashionable in some quarters to consider these cells as part of what is called the mononuclear phagocytic system or the lymphoreticular system. Early histological studies on morphology and in situ labeling laid the foundations to appreciate the diversity and functional capacity of these cells in the steady state and during pathology.
