Menopause Information from me.stfw.info.cdn.cloudflare.net

This process is alternatively referred to as late-onset or andropause. Symptoms Some women don't have any symptoms during menopause or only have a few symptoms.

Menopause

Also, menopause symptoms can develop when a person undergoes surgery to remove their ovaries. Clinical manifestation and evaluation of spontaneous primary ovarian insufficiency premature ovarian failure.

Stages of Menopause

The symptoms are the result of a decreased production of estrogen and progesterone in your ovaries. The frequency of hot flashes varies from one or two per day to one per hour.

What Is Menopause?

The question may seem irrelevant, but it is helpful to know the date of your last period, not only so that you can respond to symptoms in the most appropriate way, but also for contraceptive purposes. Talk to your doctor about your birth control needs. You might bleed more or less than usual.

menopause

It usually begins between the ages of 45 and 55, but can develop before or after this age range. Women in North America will likely experience natural menopause between ages 40 and 58, averaging around age 51. At this time, it is important to and make sure you get lots of to keep your bones strong.

menopause

Irregular periods may be your first sign of menopause. However, if you kept your ovaries — removal of your ovaries is called an oophorectomy — you may not have symptoms of menopause right away.

Menopause: Symptoms, causes, and treatments

Trip Tip: Lower hormone levels also increase your risk for related diseases like osteoporosis. Talk to your doctor about how to best manage menopause. Postmenopause starts after one year has passed since your last menstrual cycle.
