CCP

CCI classifies a broad range of interventions, such as: therapeutic interventions including inpatient and day surgeries, surgical and non-surgical; diagnostic interventions including diagnostic imaging, tests, measurements, biopsies and explorations; cognitive, psychosocial and sensory therapeutic interventions other healthcare interventions such as assistance with activities of daily living, environmental assessments, and counselling; and therapeutic interventions strengthening the immune system. Only the device generating or administering the energy can be classified. Of note, we did not determine the burden of diarrhea or constipation on the patient or health system after the initial diagnosis, nor did we assess whether these symptoms resolved with time.

University of Manitoba

For commercial re-use, please contact journals. Predictors of Outcomes Of the 344 HD patients diagnosed from FY1991 to 2001, 292 84. All children born in Ontario during the same period without HD were considered to be controls.

**CODING TIP: Diagnostic vs. Therapeutic Excisions**

The manufacturer must take into consideration all of the rules in order to establish the proper classification for their device. This mixture of classification standards existed in Canada from 1979 and on the CIHI Discharge Abstract Database from 1987.

ICD

There may be cases where either a device cannot be classified by the existing rules because of an unusual characteristic, or where the resulting classification does not reflect known hazards associated with the use of the device. Outcomes To determine the long-term outcomes of HD patients and controls, the OHIP database was searched for physician visits associated with diagnostic codes for diarrhea 009 or constipation 564. Health Canada is committed to ensuring that such requests are justifiable and that decisions are clearly documented.

ICD

Each of the major sections are represented by the first number in the code followed by two letters indicating the anatomical location or stage of development.

### **Codes and classifications for clinical health data**

When establishing a VCPR with a new client or when conducting a periodic review of surgical procedures on an existing client's farm, the CVMA encourages veterinarians to ensure that their clients are trained on how to recognize and control acute and chronic pain. A device which comes into contact with the surface of the eye, or which penetrates inside the body in whole or in part , either through a body orifice or through the surface of the body, is an invasive device.
