Childless Expectations and Childlessness Over the Life Course

To the demographic determinants of childlessness, therefore, we need to add de facto childlessness: the lack of support from any children. In this we highlight major data collection efforts of each type.

Cross

Childlessness and the psychological well-being of older persons.

10 Research on the Demography of Aging in Developing Countries

While the other Scandinavian countries—Norway, Sweden, Iceland, and Denmark—have regularly reported low levels of childlessness, Finland has historically had elevated levels of childlessness. Even so, in the United States, self-perceptions of health have been found to be excellent predictors of mortality Massey and Shapiro, 1982; Idler and Kasl, 1991. Estimated childlessness in Indonesia The current situation of older generations in Indonesia, and more particularly East Java, provides a case in point.

Four Decades of Trends in Attitudes Toward Family Issues in the United States: The 1960s Through the 1990s

However, some differences in female childlessness by educational attainment remain: for example, for the cohorts born around 1960, about 35 % of the tertiary educated women have remained childless. Unpublished manuscript, King's College, London. In a recent study, using harmonized cross-sectional data from the Health Retirement Study HRS global family of aging surveys provided by the Gateway to Global Aging repository Lee, 2015 , we examined the association between childlessness and health among adults aged 50 years and older Quashie et al.

Actual and de facto Childlessness in Old Age: Evidence and Implications from East Java, Indonesia

Death and Disease in Southeast Asia: Explorations in Social, Medical and Demographic History. A report of the Committee for the Study of

Malaria Prevention and Control, Division of International Health, Institute of Medicine.

The diversity of pathways to childlessness in the Czech Republic: The union histories of childless men and women

Mortality may strike adult children on whom parents are expected to rely. To have or have not: Parent status and the subjective well-being of older men and women. They show that access to and the prevalence of assisted reproduction vary greatly across countries.

Cross

In addition, to facilitate comparisons across outcome variables, we transformed outcome variables to z-scores in the multivariate analyses.
