## Agribusiness Model Companies: Innovation Inspires Sustainable Food Systems

Fertiliser deep placement FDP is used by farmers across Burkina Faso, Niger and Nigeria.

## Agribusiness and Innovation Systems in Africa

This includes some of the drivers we expect to shape the future of the industry and potential challenges that may arise. Scientific innovations in food, land, and water systems will be deployed faster, at a larger scale, and at reduced cost, having greater impact where they are needed the most.

## Agricultural innovation systems in Africa: reflections on an international workshop

Numerous farmers in Malawi, Rwanda, Sudan, Uganda and Zambia have already started using the lowcost pumps for irrigation purposes. They can provide greater certainty for investors and can help overcoming the lack of an enabling regulatory environment, especially when a combination of market incentives and institutional mechanisms are merged into such agreements.

## How Innovation Is Stimulating Agriculture In Africa

Through food system transformation, resilient agri-food systems, and genetic innovations CGIAR's ambition is to meet and go beyond the Sustainable Development Goals SDGs. Additionally, the need to bring and expose policy makers to key events and ensure they receive and contribute to building evidence on a sufficient scale about what currently works through action research was also proposed. This is expected to help give the companies, including those in farming and other agricultural support sectors, opportunities to make themselves more attractive to investors.
