Fruits

It is characteristic of family Leguminosae Pea, Gram etc.

Fruit or Vegetable

Silique: Two carpels separated by a seed-bearing septum.

Difference Between Fruit and Seed

Some of these dry fruits are processed into bread, beverages, and alcohol. Right: Longitudinal section of a dry fruit showing the large, angular seeds. Silique: Silique develops from a bicarpellary, syncarpous, superior ovary which is unilocular but becomes bilocular due to a false septum called replum.

Difference Between Fruit and Seed

The pericarp may be classified into three layers from outer to inner, and they are; — epicarp, — mesocarp, and — endocarp. In a biological sense, many fruits are true fruits while some are culinary fruits.

Difference Between Fruit and Seed

Succulent or Fleshy Fruits: These are simple fruits with fleshy pericarp. Types of Fruits Fruits can be classified in many ways. The two cotyledons act as appendages and help in of food from the endosperm.

Fruits

On the other hand, multiple fruits are a result of multiple flowers with fused ovaries. .

Seed and Fruits

Fruits have an exact botanical definition, while vegetables have no exact definition.

Differences Between Fruits and Vegetables

The coconut provides a good example of a fruit adapted for dispersal by water.
