## interpreting C

Tetrahedron Letters 2009, 50 39 , 5470-5473. Nile, Brajesh Kumar, Se W.

## Synthesis of stilbene carboxylic acids as scaffolds for calcium sensors

Lot and Batch Numbers can be found on a product's label following the words 'Lot' or 'Batch'. The EC or list number is the primary substance identifier used by ECHA. The peak at just under 200 is due to a carbon-oxygen double bond.

## 13440

These carbons are again in the environment: R C H 3. Looking at the more detailed table, this peak is due to the carbon in a carbon-oxygen double bond in an acid or ester.

## Carboxylic Acid

A substance identified primarily by an EC or list number may be linked with more than one CAS number, or with CAS numbers that have been deleted. If you are not the author of this article and you wish to reproduce material from it in a third party non-RSC publication you must using Copyright Clearance Center. Its IUPAC name is 4-aminobutanoic acid.

## carboxylic acid

If you are looking at the detailed table, you need to think very carefully which of the environments you should be looking at. But you would be wrong! If you were working from the simplified table in an exam, your examiners would have to allow any valid alternatives. Rincón, Carlos Mateos, José Francisco Soriano, Óscar de Frutos.

## Synthesis and evaluation of cytotoxicity of stilbene analogues

Once again, don't worry about the discrepancies. If you look back at the table, that could well be a carbon attached to a carbon-oxygen double

bond.
