Outcome of mitral valve repair or replacement for non

Helder MR, Schaff HV, Dearani JA, Li Z, Stulak JM, Suri RM, et al. Outcomes were evaluated by Cox survival analysis with propensity score adjustment and bootstrap validation.

Mitral Valve Repair vs. Replacement for Ischemic MR: An Ongoing Debate

A pooled analysis indicated statistically higher late-mortality rate in the MV replacement group than in the MV repair group 1.

Mitral repair versus replacement for ischemic mitral regurgitation

At latest follow-up, recurrence of at least moderate mitral regurgitation MR was higher following MVr RR, 5. In patients with moderate IMR, isolated CABG may offer clinical outcomes similar to those of the combination of mitral valve repair and coronary artery bypass surgery. Cardiopulmonary bypass duration is an independent predictor of morbidity and mortality after cardiac surgery.

Mitral Repair Versus Replacement for Ischemic Mitral Regurgitation

Plasma visfatin concentrations and fat depot-specific mRNA expression in humans.

Mitral

Although both mitral valve repair MVr and mitral valve replacement MVR have been performed in the surgical management of IMR, there remains uncertainty regarding the optimal approach. The etiology of MR is heterogeneous and may lead to outcome bias after valve surgery. Search strategy We systematically searched for studies, including randomized controlled trials RCTs and observational comparative studies, of surgical MV replacement versus surgical MV repair that enrolled patients with NIMR.

A meta

Even mild IMR increases mortality by 17% over that of patients without it. The aforementioned mechanisms need to be validated.
