Process Control Fundamentals

Engraving Lines are incised on a highly polished metal plate by means of a sharp-pointed instrument, diamond-shaped in cross section, called a burin or graver. Duplicating is a process in which the desired number of copies is prepared from a master copy with the help of a duplicator.

The Theoretical Fundamentals of the Screen Printing Process

Planography however, is the printing of a flat surface.

Printing processes

The process and materials of these techniques influence the appearance of the final print... FOUR MAIN TYPES OF PRINTMAKING Relief Printing This is printing from a raised surface. This technique subsequently developed into a totally photomechanical process: 2 Machine photogravure, in which the tone is supplied by a cross-line screen.

CPC Definition

Posters, flyers, pamphlets and mailers would not exist.

Duplicating Machines

The drum in the machine should be changed to take copies in different colours. Lithograph The design is drawn or painted on the polished, or grained, flat surface of a stone, usually Bavarian limestone, with a greasy crayon or ink. The printed piece is heated and the powder and ink mixture dries to form a raised effect on the paper.
