## Four Business Benefits of Systems Integration

In general, the funds used in creating new systems are justified by financial experts by presenting the savings or increased revenue for implementing the proposed solution. Other goals include increasing in size, creating economies of scale, increasing over distributors and suppliers, increasing, expanding the company's market or entering a new market, and reducing competition.

Some of the reasons why a company may choose to integrate vertically include strengthening its supply chain, reducing production costs, capturing upstream or downstream profits, or accessing new distribution channels. Modernizing your environment enables you to become more agile, flexible, and scalable, and it also saves money, both short and long term.

### **The Business of Systems Integration**

Whether a business wants to streamline internal or external communication and data sharing, there is a method that will meet the integration need. The editors of this volume have gathered together the best thinking from around the world on this vital subject.
