Remember that other researchers should ideally be able to reproduce experiments exactly, based on the lab report; using first person indicates to some readers that the experiment cannot be duplicated without the original researchers present. In other words, your results will only be considered valid if any researcher performing the same experimental tests and analyses that you describe would be able to produce the same results.

Scientific Writing: Easy When You Know How by Jennifer Peat

The advantage is that we can replace the $\times 10$ s with.

Scientific Reports

Please do not use this list as a model for the format of your own reference list, as it may not match the citation style you are using. In any event, both professional researchers and undergraduates need to connect the background material overtly to their own work. Sciences What this handout is about Nearly every element of style that is accepted and encouraged in general academic writing is also considered good practice in scientific writing.

Sciences

Generally speaking, people investigating some scientific hypothesis have a responsibility to the rest of the scientific world to report their findings, particularly if these findings add to or contradict previous ideas. For maximum effectiveness, limit yourself to three to five lines per graph; if you have more data to demonstrate, use a set of graphs to account for it, rather than trying to cram it all into a single figure.

Writing a scientific report

The final sections of the book include information about actual writing, which didn't seem completely specific to scientific writing, but was all together useful. Be sure that your hypothesis includes both variables. You might draw this conclusion, however, if you cited evidence that correlations between fur thickness and basal metabolic rate are also found in twenty other mammalian species.
