

# Precautions for laboratory workers who handle carcinogenic aromatic amines.

## Chester Beatty Research Institute - Appendix I

Description: -

-Precautions for laboratory workers who handle carcinogenic aromatic amines.

-Precautions for laboratory workers who handle carcinogenic aromatic amines.

Notes: Adapted from recommendations of the Association of British Chemical Manufacturers.

### Sampling and Analytical Methods

This method was used to remove 4-aminobiphenyl from water.

### CAB Direct

A Spectra-Physics SP4290 integrator was used in this evaluation. It is essential that all laboratory workers understand certain basic principles of toxicology and learn to recognize the major classes of toxic and corrosive chemicals.

### Evaluating Hazards and Assessing Risks in the Laboratory

The filters were then assembled in three-piece cassettes with back filters. When skin is damaged, penetration of chemicals increases.

### Safety Measures to be Taken when Moving to a New Laboratory

Objects made of ferromagnetic materials such as ordinary steel may be scarcely affected beyond a certain distance but at a slightly shorter distance may experience a significant attraction to the field.

### Appendix I

For more information on CDC's web notification policies, see. Allergens are another class of acute toxicants whose effects are not included in LD 50 data.

### Sampling and Analytical Methods

Bracket sample concentrations with standards. For purposes of managing the storage of chemicals that can form peroxides upon aging, the three

classes given in provide useful distinctions.

#### 4

This chapter provides a practical guide for the laboratory worker engaged in these activities. Safest method of administering volatile carcinogen is by injection of a soln.
