Cryptographic pairings Kristin Lauter and Michael Naehrig. Noncommutative cross-ratio and Schwarz derivative Vladimir Retakh, Vladimir Rubtsov and Georgy Sharygin. Triangulated categories, derived categories, and perfect complexes-- Appendix C.

TOPICS IN DYNAMICS AND ERGODIC THEORY LONDON MATHEMATICAL SOCIETY LECTURE NOTE SERIES

Particular attention is paid to the development of the ideas surrounding zeta and L-functions, using quotes from original sources and comments throughout the book, pointing the reader towards the relevant history. This textbook is an account of the theory of solitons and of the diverse applications of the theory to nonlinear systems arising in the physical sciences.

This biennial conference is a well-established international event, with speakers from around the world.

864 results in SearchWorks catalog

Solitary waves, cnoidal waves, conservation laws, the initialvalue problem for the Kortewegde Vries equation, the Lax method, the sineGordon equation and Backlund transformations are treated. Uniform existence of the IDS on lattices and groups Christoph Schumacher, Fabian Schwarzenberger and Ivan Veselic. The books are intended primarily for two groups of readers: those interested in the structure of automorphic forms on reductive groups over number fields, and specifically in qualitative information on multiplicities of automorphic representations; and those interested in the classification of I-adic representations of Galois groups of number fields.
