## Causes of Depression

There are two basic ways that this process can play out: the anaclitic pattern, and the introjective pattern. The opposite is also true where you can have a social or mental reaction to a bodily problem BMC Medicine, 10, 111 doi:10.

## Biology of Depressive Disorders. Part A

Frontiers in Psychiatry, 11, 71 doi:10. Why has there been such an increase in these numbers? If the first door is opened with the right key, then the person can proceed to the next door with the next key and so on.

## Current Understandings of Major Depression

Pharmacotherapy with psychological therapy may be the most beneficial treatment approach for many psychiatric conditions, but there are still many unanswered questions.

## Compare and Contrast two Theories of Major Depression

The key assumption of the diathesis-stress model is that both factors, diathesis and stress, are necessary in the development of a disorder. Sigmund Freud is credited with inventing psychodynamic theory and psychoanalysis.

## Biology of Depressive Disorders. Part A

Some of the symptoms and signs typical of patients suffering from depression reflect a primary disorder of biochemical and neurophysiological functions and are not commonly found in other forms of psychic disturbances. Some types of depression have been found in families from generation to generation, which may possibly suggest that it can be inherited Grohol, 2006.
