## YaraMila COMPLEX

Pasturemag 12N is also a great product for maintenance use, delivering all the essential elements, including magnesium. Managing Director and CEO, Matt Shackleton, says the company is now investigating other geographic specific organic certification options as part of its global marketing strategy.

## Fertiliser

It is a general-purpose cropping fertiliser that is suitable for use on soils with an Olsen P less than 15. Dolomite is a naturally existing rock that is valued for its lining qualities and its high content of magnesium and calcium. The use of muriate of potash means these products are not suitable for use on chloride-sensitive crops.

## Fertiliser

Please contact your local Yara Area Manager for further information. Using an SOP based fertilizer is particularly important for crops with a low tolerance to chloride.

## Yara Liquid fertilisers

It is particularly suited to soils prone to potassium leaching. e.

## Chevron Down Icon

The combination of different forms give greater and a longer lasting availability of phosphorus to crops over a wide range of soil types. It is also ideal for hay and silage paddocks to promote recovery after harvest or for dairy farms with high potassium requirements that require multiple applications. The potassium in YaraMila Complex 12-5-15 stimulates growth of strong stems and provides some disease and pest tolerance by increasing the thickness of the outer cell walls.

**NPK fertiliser, YaraMila Compound fertilisers**

YaraMila Complex 12-5-15 is a combination of nitrogen N , phosphorus P and potassium K designed to maximize crop yield and quality. Serpentine Super 25K is blended with muriate of potash to create a general-purpose maintenance fertiliser that is ideal for use in a range of pastoral situations.

#### **NPK fertiliser, YaraMila Compound fertilisers**

It is also ideal for hay and silage paddocks to promote recovery after harvest or for dairy farms with high potassium requirements that require multiple applications. Compared to pure ammonium or urea based fertilizers, YaraMila products are significantly more effective on an equal nitrogen basis, therefore, giving better yields and quality. Sulphurgain 20S is a good choice for farms where light rates of phosphorus are required in addition to immediate and long-term sulphur.

#### **NPK fertiliser, YaraMila Compound fertilisers**

Magnesium is required for many plant processes including transfer of energy, protein synthesis and cell structure. Serpentine Super 15K is blended with muriate of potash to create a general-purpose maintenance fertiliser that is ideal for use in a range of pastoral situations. It is particularly suited to soils prone to potassium leaching, e.
