Behavioral Health vs Mental Health: What's the Difference?

Observers may be unwilling to get involved when or do not know the whole story. What is autism spectrum disorder? Find out who's supervising your child — for example, at a sleepover.

Research that takes into account the socioeconomic conditions of single-parent households and other risks, including disciplinary styles and problems in supervising and monitoring children, show that these other factors account for the differential outcomes in these families.

The Development of Delinquency

To date, little research has been able to trace direct pathways from these neighborhood risk factors through child and adolescent development, although some of the larger ongoing studies, such as the Project on Human Development in Chicago Neighborhoods, are collecting the kind of comprehensive data on biological and social aspects of individual development as well as on the characteristics of a large number of ecological areas that could make this kind of analysis possible Tonry et al. American Psychologist 49 8 :725. In order to simplify presentation of the research, however, this section deals only with individual factors.
