## Samuel Walker Phone Number, Address, Public Records

The position of the flow control piston is adjustable to variably select the open position of the valve head in accordance with a desired valve flow rate. The opened valve head moves into close proximity with a flow control piston within the control chamber and cooperates therewith to meter fluid outflow from the control chamber in a manner maintaining a minimal or substantially zero pressure differential across the diaphragm.

## Samuel Walker Phone Number, Address, Public Records

Engraving in England in the Sixteenth and Seventeenth Centuries. Contemporary Photo-Etchings, The Allen Memorial Art Museum, Oberlin College, 1987-88. In a preferred form, the valve member is carried by a diaphragm for movement between closed and open positions in response to a solenoid actuator, for regulating the pressure within a control chamber acting upon the diaphragm.
