In other cases, transport demand is unstable and uncertain, which makes it challenging to offer an adequate level of service. However, in some cases, elaborate and expensive infrastructures and modes are required to provide mobility, such as for air transportation. All these factors combined can make the behavior of transport users somewhat different across regions and settings.

Can be tooled in gilt or blind. Similar to transport supply, it is expressed in terms of the number of people, volume, or tons per unit of time and distance. Transport demand can vary under two circumstances that are often concomitant; the number of passengers or freight increases or the distance over which these passengers or freight are carried increases.
