Courses

Topics in Electrical and Computer Engineering with Laboratory 4 Topics of special interest in electrical and computer engineering with laboratory. Course emphasis will be on the solar atmosphere, how the solar wind is produced, and its interaction with both magnetized and unmagnetized planets and comets. Vibrations and waves in strings and bars of electromechanical systems and transducers.

Mechanical Engineering (MEC ENG) < University of California, Berkeley

Prerequisite: Econ 3010 and STAT 2120 or equivalent.

The economic impact of obesity in the United States

In this article, we provide an overview of the state of research on the likely economic impact of the US obesity epidemic at the national level.

Nonlinear system

Linear systems display sensitive dependence on initial conditions in the case of divergence. An ability to apply knowledge of mathematics, science, and engineering.

EconPapers: American Economic Review

Topics to be covered include cellular approaches, call processing, digital modulation, MIMO technology, broadband networks, ad-hoc networks, and wireless packet access. Thompson et al sorted subjects into three categories — healthy, overweight, and obese — according to initial 1990 BMI.

Manuel Arellano

Optical Fiber Communication 4 Optical fibers, waveguides, laser communication system

The economic impact of obesity in the United States

Topics vary based upon current research and have included nonparametric Bayesian models; sampling methods for inference in graphical models; Markov Chain Monte Carlo MCMC methods.

Manuel Arellano

Thompson et al present a dynamic model of the relationships between BMI and the risks of five diseases linked with obesity: hypertension, hypercholesterolemia, type 2 diabetes mellitus, CHD, and stroke.
