## Yeovil

At Pinhoe the double-track resumed and continued through to Exeter St Davids station. St Lawrence could be heard all the way to the tunnel! It was extended to Exeter, opening on 1 May 1844. Remember too, that the Hitachi trains have regenerative braking.

## Yeovil

In the mid-twentieth century, passenger services generally worked by a single with two slam-door carriages, and later an powered by a locomotive. It would appear that a well-designed Universal Fast Charge facility at Yeovil Junction station could enable battery electric trains to run between Salisbury and Exeter St Davids stations, without any adjustment to the existing timetable.

## Salisbury

This 19th March 1966 view is over the wall at the west end of platform 1 when the remains of the GWR station were being used as a goods yard. This was 742 yards 678 m long, the only tunnel between Salisbury and Yeovil.

## Southern Railway routes west of Salisbury

It gave access to various coastal resorts in East Devon and to Exeter, beyond which - over a network of lines known commonly as the 'Withered Arm' - it reached out to Plymouth, Ilfracombe, Bude and Padstow.

## Salisbury

Main article: The Bristol and Exeter Railway was authorised by Act of Parliament in 1836, following quickly on the 1835 Act for the construction of the GWR between London and Bristol. The section from Wilton to Templecombe has reverted to single track with passing loops at Tisbury and Gillingham. The new through route was opened for goods trains on 11 June 1906 and for passenger trains on 2 July 1906, and the route was then the main line for express passenger trains to Devon and Cornwall.

## RAILSCOT

Points and Facing Point Locks FPLs were worked mechanically, but in subsequent years a number were converted to clamp-lock operation. It does not store any personal data. Charging The Batteries Much of the charging of batteries will be performed whilst running on electrified lines.

### **Salisbury**

The onward development forms the main content of this article.

### **Yeovil**

This company had opened its main line from London to Bristol in 1838, and developed alliances that extended its influence to Exeter.
