## Performance Measures in Radiology

This article introduces the measure development process, beginning with topic selection, followed by measure development and testing, National Quality Forum endorsement, and implementation.

## Quality and Standards

To improve the safety and quality of the care that radiologists provide, and to allow radiologists and radiology personnel to remain competitive in an increasingly complex environment, it is essential that all imaging departments establish and maintain managed, comprehensive, and effective performance improvement programmes. The practice of medicine involves not only the science, but also the art of dealing with the prevention, diagnosis, alleviation, and treatment of disease. The practice parameters and technical standards will be adopted, adopted as amended, not adopted, or referred to the Board of Chancellors for action.

## PAHO/WHO

The variety and complexity of human conditions make it impossible to always reach the most appropriate diagnosis or to predict with certainty a particular response to treatment. Document Drafting A writing committee is constituted prior to drafting or revising documents for a given year.

## Guidelines and Standards

Even before the team formed, the department had a results communication solution embedded within its dictation system to expeditiously deliver imaging findings to referring clinicians. In 2001, the Institute of Medicine published the report Crossing the quality chasm, which specified six goals for healthcare quality improvement efforts: that healthcare be safe, effective, patient-centred, timely, efficient, and equitable Committee on Quality of Health Care in America 2001.

## Quality and Standards

Thus, an approach that differs from the parameters, standing alone, does not necessarily imply that the approach was below the standard of care. Document Approval The final documents are sent to the relevant collaborating societies for acknowledgement if they are going through the Council

approval process. Many UMMC patients, especially those in the emergency department ED , undergo imaging studies that frequently reveal potentially clinically relevant incidental findings, such as pulmonary nodules.

## **Successful quality management system in a radiology department**

### **Quality and Standards**

SIR hereby grants a worldwide, non-exclusive, nontransferable, royalty-free license to the CAIR to publish, reproduce, and distribute, for noncommercial, commercial, or any other purpose, copies of the Articles in print, electronic, or other media intended for an audience within Canada, whether or not in use at the time of execution of this Agreement. It reflects wide consultation and valuable comments and suggestions received from professional colleagues and relevant UK government agencies and regulatory bodies. Other important elements include a focus on the customer and the processes, an understanding of process variation, a willingness to experiment with implementation of ideas, and teamwork Applegate 2004.

### **Performance Measures in Radiology**

Documents that are not considered part of the Medical Physics approval process or the Radiation Oncology approval process are presented to the ACR Council for approval. Once implemented, measures may undergo further testing and be re-endorsed, modified, or retired.
