The meltwater hypothesis for subglacial bedforms.

High resolution sequence stratigraphy: the East Coulee Delta, Alberta

A significant aspect of the controversy was determining if and when glaciers from the Rocky Mountains merged with the Laurentide Ice Sheet. The fescue grassland in Saskatchewan.

Postgraduate Study

Furthermore, they cited evidence that suggested that the maximum push of the ice sheet into the front Canyon ranges of the Mackenzie Mountains occurred as early as 30,000 years before present as determined by radiocarbon dating YBP. In Cypress Hills Plateau Alberta and Saskatchewan.

Geotimes

Here, faunal assemblages with Aftonian, Kansan, and Yarmouthian affinities have been identified in both glacial and nonglacial deposits.

Evidence for Basement Fault Reactivation in Southern Alberta: An Integrated Topography and Airborne

The sedimentary wedge is inferred to thicken and coarsen from west to east, which further suggests an alluvial fan genesis.
