Economic Evaluation in Education

The evaluation attributed the increase in contraceptive use to the improvement in the attitudes about contraception among husbands of enrolled girls Edmeades and Hayes, 2014. Second, the methods for calculating comparable effect sizes from studies using complex econometrics methods, as used in this review, are under-developed and require further research for a complete discussion, see Becker and Wu ; Duvendack et al.

Technical and vocational education and training (TVET) for young people in low

Although differences between each intervention group and the control group were statistically significant, the sexual and reproductive health content may have been the critical component for improving contraceptive use among the married adolescent girls. First, not only were the observed effects generally small and difficult to detect, the review does not provide conclusive evidence of the effectiveness of TVET on youth employment outcomes. İŞKUR courses contracted to private providers, particularly those facing more competition, have a large positive impact on employment.
