### Human Evolution News, Articles

And some of them-- maybe they explored the right ecosystem, where it was more advantageous to do so-- started to walk on two legs.

### The Story of Human Evolution: Were We Chimps?

Evolution is not a force that purposefully changes creatures; it is the process that species undergo to avoid extinction.

### human evolution

Future human evolution can be divided into several subcategories, including transhumanism, a philosophical stance pointing to humans surpassing their biological limitations with the help of modern technology. Some argue it is the ancestor of Homo sapiens idaltu, which itself was the ancestor of Homo sapiens sapiens, our species.

### 12 Theories of How We Became Human, and Why They're All Wrong

The brain of homo habilis was mild 500—700 cc.

### Timeline of human evolution

As DNA sequencing became more advanced, scientists were able to compare the actual order of DNA bases nucleotides between DNA sequences from different creatures. The primary resource for detailing the path of human will always be specimens.

### Stages of Human Evolution, Stages Of Evolution Of Man, Human Evolution Stages, Human Evolution Timeline, History of Human Evolution

This points to the fact that our species originated in Africa. It wasn't just there was one Lucy. The way particular genes are expressed — that is, how they influence the body or behavior of an organism-- can also change.

## **Check Out The 7 Probabilities Of Future Human Evolution**

Australopithecines later subdivided into various subspecies, including *Australopithecus anamensis*, *A. Homo sapiens* is the last surviving species of the genus homo, and modern-day human beings, or the *homo sapiens sapiens* are its subspecies. *Orrorin tugenensis* 6 million years ago Also discovered in 2001, this time in the Tugen Hills region of central Kenya, *Orrorin tugenensis* is another prime example of early upright locomotion.
