Sandra is a Pew Scholar in Conservation and the Environment, and has been named one of the Scientific American 50, an award recognizing contributions to science and technology. This book should be mandatory reading not only in academia, but for all public policy advocates seeking sustainable pathways for the future.

A Pivotal Moment

It surveys the new demographic landscape in which population growth rates have fallen, but human numbers continue to increase. This crossover in the proportions of young and old reflects both improved survival and reduced fertility.

Are these issues a subject for debate in Copenhagen? What technologies will be used? Last Oasis appears in eight languages and was the basis for a 1997 PBS documentary.

A Pivotal Moment: Population, Justice, and the Environmental Challenge by Laurie Ann Mazur, Paperback

As the authors in this volume explain, to slow population growth and build a sustainable future, women and men need access to voluntary family planning and other reproductive health services. No one knows the path to sustainability because no one knows the destination, if there is one. Around 2000, each group constituted about 10 percent of humanity.

Understanding the Global Food Crisis: Malthusian Nightmare or Free-Trade Fiasco? People count and numbers matter—and this book is a classic call to action we cannot afford to ignore if we care about the well being of current and future generations. It presents the latest research on the relationship between population growth and climate change, ecosystem health, and other environmental issues. Are mud slides, hurricanes, or floods acceptable risks, or not? John Bongaarts is a Population Council vice president and distinguished scholar.
