Toward Understanding the Interplay of Environmental Stressors, Infectious Diseases, and Human Health: Proceedings of a Workshop—in Brief

Synopsis This volume illustrates the impact of environmental oxidants on the tissues of the eyes, lungs and skin, as well as on the immune system—highlighting common illnesses, injuries and pathologies induced by pro-oxidant environmental xenobiotics such as inflammation, immune response, signal transduction, regulation of gene expression, and carcinogenesis.

Environment & Metabolic Disease

According to estimations of the World Health Organization WHO , environmental risk factors account for an appreciable part of global deaths and

life years spent with disability. It has been suggested that the accelerated rates of disease progression among populations such as African Americans and the poor can be attributed to the high prevalence rates of metabolic conditions known to impair kidney function ie, diabetes, hypertension.
