## **Bioecological model**

The author expressed this point as follows: The solution to this antithesis in biology has to be sought by using an organismic or system theory of the organism which, on one hand, and as opposed to the machine theory, may discover that the essence of the organism lies in the harmony and co-ordination between processes, and which on the other does not interpret this co-ordination as vitalism does, using a mystical entelechy, but instead by considering the imminent strengths of the living system itself. It is also assumed that more complex levels adopt the laws of the simpler levels of which they are formed, and add new laws of their own.
