No More Dark Matter? A New Theory of Gravity Could Explain Away Dark Matter and Energy

More Work Progress was slow on the principal triangulation during a few periods in the 19th century when territorial acquisitions, especially those with long coastlines such as Florida, Texas, the Pacific Coast and Alaska created a need for immediate hydrographic surveys and other required charting information. If this reversibility can happen very quickly, we may have the beginning of a theory to explain the law of gravity. If it passes more tests it could dethrone over 100 years of physics, and even throw out the theory of dark matter altogether. The team made predictions about the galaxies using both Einstein's classic theory of relativity and Verlinde's hypothesis of gravity.

Remarkable New Theory Says There's No Gravity, No Dark Matter, and Einstein Was Wrong

The creating of larger units from smaller units means the laws of physics are constant through out reality and do not change with size. Maybe, there was no beginning. The volumes are The Transcontinental Triangulation and the American Arc of Parallel Sp.

Theory of a new geoid

Then turning my telescope in the direction of MT HELENA, there, too was a heliotrope, shining as prettily as the one at LOLA. West of central Colorado the 39th Parallel triangulation consists of massive figures, many containing lines 100 miles and more in length, the longest being 183 miles between UNCOMPAHGRE PEAK near Ouray in Colorado and MOUNT ELLEN near Hanksville, in Utah. In this case, the first droplet can not escape the sponge ball because the sponge ball is moving on the same path and with the same speed that the first droplet moved.

[PDF] Geodetic Theory Today

T-3's involved a slightly different process, the effort required was about the same as for the Parkhurst. Toilets and tables are made of gold, making them so commonplace that no one would desire them to the point of harming another to attain them.

A New Theory of Gravity?

Eventually sets became known as positions and the initial settings for each position were assigned specific locations on the theodolite circle. Once lights replaced heliotropes at the turn of the century, most observations were made at night and there were more reasons for the observers to have direct contact with the lightkeepers. The survey created a major controversy.

A New Theory of Gravity?

Hilgard 1881-85 , Thomas C. THE EARLY YEARS 1807-1843 1807: Survey of the Coast Created Geodetic surveying began in the United States on February 10, 1807 with the creation of the Survey of the Coast by Congress in the presidency of Thomas Jefferson.

A New Theory of Gravity?

Whenever possible, the stands holding the personnel were separate from the instrument tripods. Selenotropes required much larger mirrors than heliotropes' 2-4 inch diameter reflectors: i. All the streets are identical, and after ten years, everyone has to swap houses by lot.
