

# Studies on membranes prepared under isoionic conditions.

**University of Birmingham - The intracellular distribution of inositol polyphosphates in HL60 promyeloid cells.**

Description: -

-Studies on membranes prepared under isoionic conditions.

-Studies on membranes prepared under isoionic conditions.

Notes: Thesis (Ph.D.) - University of Birmingham, Dept of Biochemistry.

This edition was published in 1977

## Loss, Restoration, and Maintenance of Plasma Membrane Integrity

A survey of enzyme activities displayed by plasma membranes isolated from mouse liver and three mouse hepatoma strains.

## Isotonic swelling behavior of W/O/W emulsion liquid membranes under agitation conditions

Permeability characteristics of erythrocyte ghosts prepared under isoionic conditions by a glycol-induced osmotic lysis. Brush border particulates of renal tissue.

## Permeability characteristics of erythrocyte ghosts prepared under isoionic conditions by a glycol

All fractions were assayed for adenylate cyclase, marker enzymes, and DNA. This was also true of large liposomes, which could spontaneously reseal electroporation pores up to 1 μm in diameter on a millisecond to second time scale depending on membrane tension.

## Subcellular localization and partial characterization of adenylate cyclase from rat lung

Application to binding of monovalent haptens to cell-bound immunoglobulin E. Early work on the fusion of liposome vesicles supported this notion. Differences in the association of two glycolytic enzymes with plasma membranes isolated from rat liver and hepatoma.

## Studies on plasma membranes XVII. On the chemical composition of plasma membranes prepared from rat and mouse liver and hepatomas

A mild procedure for the rapid release of cytoplasmic enzymes from cultured animal cells. A survey of enzyme activities displayed by plasma membranes isolated from normal and preneoplastic livers and primary and transplanted hepatomas of the rat.
