Overall, the companion volume offers valuable insights into maritime practices and technologies and Venetian commerce, as well as into a variety of aspects of popular knowledge and culture in the broader world of the fifteenth-century Mediterranean: from religious piety to popular medicine and astronomy. The text is written out by hand and beautifully illustrated probably at least in part by Michael himself, featuring color diagrams and illustrations of naval architecture, original drawings of astrological signs, calendrical charts, and a coat of arms Michael devised for himself. That Michael started out his career as an oarsman for the Venetian fleet is only one of the surprises in the life of this extraordinary intellectual.
