Pooled maize fractions were loaded onto the column previously equilibrated with phosphate buffer pH 7. The parasite may be a helminth or a

protozoan, for example, a nematode.

### **Parasitic Protozoa**

For example, the anti-parasitic protein may be an inhibitor of a digestive enzyme of the parasite, such as a cysteine protease inhibitor. Each section contains information on disease pathogens, treatment, diagnosis, and epidemiology of the diseases caused by the various protozoans. Serine proteases are widespread and diverse and cysteine proteases are also widely distributed and occur in bacteria, microorganisms, plants and animals.
